EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Linda Lecomte on 12/2/11.

The application has been amended as follows:

REPLACE Claims 15, 18, and 19 with the claims listed Below:

15. (Currently Amended) An encryption system, comprising:

generating a Vernam key via a symmetrical cipher by a hardware processor, the generating being aided by using a secret key and a variable parameter, the Vernam key having a length that is equal to a length of a message to be protected, the secret key having a defined key length, the variable parameter being a function of a random number and the defined key length;

encrypting by an encryptor, via a Vernam key, the message using logic operations of a Vernam cipher;

communicating, from a sending point to a receiving point, the secret key and the variable parameter via ~~[[at least one of (A)]]~~ a secure channel separate from a message-transmission path ~~[[and (B) the message transmission path, the message transmission path being secured via an asymmetrical cipher]]~~;

regenerating the Vernam key using the transmitted secret key and variable parameter;

decrypting the message using the regenerated Vernam key;

providing crypto-hardware including at least one of a chipcard and a multifunctional PC interface adapter with built-in special crypto-hardware, the crypto-hardware storing at least one generated Vernam key;

utilizing the at least one generated Vernam key stored in the crypto-hardware by the encryptor; and

wherein the encryptor being capable of coupling to the crypto-hardware, the encryptor includes at least one of a personal computer, software executable by a computer, and a terminal which implements a Vernam cipher for broad-band applications in software.

18. (Currently Amended) An encryption system, comprising:

a secret key having a defined key length;

a variable parameter having a length being a function of a random number and the defined key length;

a symmetrical cipher;

a Vernam key having a length that is equal to a length of a message to be protected; the Vernam key being generated from the symmetrical cipher encryption of the secret key and the variable parameter, the Vernam key encrypting the message using logic operations from a Vernam cipher;

at least one of a message-transmission path and a secure channel, the message-transmission path being a path over which the encrypted message is communicated, the secure channel being secured by encrypting the secret key and the variable parameter with an asymmetrical cipher, the encrypted secret key and the variable parameter being communicated over the secure channel, the secure channel being separate from the message-transmission path; and

a crypto-module including a storage space and one of the symmetrical cipher and the asymmetrical cipher, wherein the crypto-module is separate from the encryptor, the storage space is used to store the Vernam key, and any Vernam cipher operations are performed in the encryptor,

wherein the secret key and the variable parameter are communicated over the secure channel and, subsequently, used in regenerating the Vernam key, the regenerated Vernam key decrypting the message; and wherein the encryptor communicates with the crypto-module to utilize the Vernam key.

19. (Currently Amended) The encryption method according to claim 18 ~~[[8]]~~, wherein the communicating, from a sending point to a receiving point, the secret key and the variable parameter occurs via ~~[[at least one of (A) a secure channel separate from a message transmission path and (B)]]~~ the message-transmission path, the message-transmission path being secured via an asymmetrical cipher.

Allowable Subject Matter

Claims 15-30 are allowed over the prior art of record. Applicant has provided persuasive arguments, and significant claim amendments in order to overcome the prior art. Claims should be viewed as allowable in their entirety rather than any one novel feature.
